Title:
Project 4: Montreal River App 2.0

Description:
My app was created to allow user to better access the rivers surrounding the island by providing a list of locations by activity (Go for a swim, Launch a boat or Play water sports) as well as information for each location that includes:

Location (name)
Swimming Permitted (y/n)
Lifeguards Available (y/n)
Has Beach (y/n)
Boat Ramp Available(y/n)
Non-Motorized Watercraft Permitted (y/n)
Bathrooms Available (y/n)
Address (street address)
Operating Hours (open-close)
Dedicated Parking (yes/no/paid)
Entrance Fee (y/n)
Water Quality Information (phone number)

(Version 2.0) Users are able to give their opinion (thumbs up or thumbs down) on the different river-side locations.

A button called "Help us improve the app!" encourages users to give their *name* (optional), *email* (optional), *borough* and *favourite place to access the rivers surrounding Montreal*.

Work distribution and grading:
I have opted to work on the project individually because I am building on an existing app. Therefore, I opt for individual work and individual grading.

I have partnered with **MoonHee Kim** and we will share our apps with each other to test and get feedback. (Fransiskus Aldo and Aysegul Hammaly have also offered to be available if we need additional feedback, but in an unofficial capacity.) I am hoping MoonHee might be able to help me solve a css problem I am having!
